

On the Subject of Not Forget Cyan't Non't

What color is Perry the Platypus?

This module will display 2 one-digit numbers each time a non-ignored module is solved. For every displayed pair, add the two numbers together and remember this result for later.

Once every other non-ignored module has been solved, the touchscreen will begin to respond to your inputs. Enter each result from earlier in the order the number pairs appeared.

If an incorrect number is entered, the module will briefly display the relevant number pair again.
